**The school struggled financially in its early years and had not yet realised its goal of uniting the different fields of the workshops in a single building task. That changed when a private commission arrived from a Berlin lumber merchant who asked the founder of the school to design a personal villa. Every workshop took part, decommissioned battleship.**

FC Baizel Regular 11 pt

Herbert Bayer joined the Bauhaus as a student and stayed to direct the printing workshop. He designed the universal typeface, a single-alphabet geometric sans that dropped capitals entirely.

FC Baizel Light 10 pt

The Wassily chair was designed in 1925 while Breuer led the cabinet-making workshop. Inspired by the handlebars of his Adler bicycle, it bent one continuous line of steel into a seat, and decades later an Italian maker rediscovered its Kandinsky anecdote and gave the chair its name.

FC Baizel ExLight 13 pt

Named as a tribute to the daughter of the designer, the chair was mass-produced from the late twenties onward and bought by an American furniture house in 1968, which has kept it in the catalogue ever since. An original example is held by the Museum of Modern Art, whose curator counted it among the ten most important chairs of the twentieth century, and roughly a quarter of a

FC Baizel Thin 14 pt

Breuer moved to the United States in 1937 and taught architecture at Harvard, where his students included future luminaries of the profession. He practiced from New York and built museums, libraries and college campuses across the country, expanding the sculpture vocabulary of his carpentry years into a personal concrete

Sommerfeld House was the first major project completed by the Bauhaus school in Berlin, built almost entirely from salvaged timber.

FC Baizel Light Italic 16 pt

*The Cesca chair, created in 1928 by Marcel Breuer, combined a tubular steel frame with a woven cane seat and back. Among the earliest tubular steel furniture designs, it exemplified the ambition of reconciling art with industry.*

FC Baizel Medium 31 pt

The Vorkurs trained every incoming student in the grammar of materials before any specialization began at the school.

FC Baizel Bold Italic 22 pt

***An early original now sits in the collection of a New York museum whose curator counted it among the ten most important chairs of the twentieth century. The design proved that a single bent tube could carry both structure and comfort.***

***The Wassily chair was designed in 1925 while Breuer led the cabinet-making workshop at the Bauhaus in Dessau. Inspired by the handlebars of his Adler bicycle, it bent one continuous line of chrome-plated steel into a seat.***

The Berlin key *also known as,* German, Schliesszwangschluessel, or, English, forced locking key is a key for a type of door lock, and the lock that goes with it. It was designed by the Berlin locksmith Johann Schweiger patented in 1910, and is *usually* known as the Berlin lock (Berliner Schloss). The key has two bits, one at each end, and no stem as such; at one end, the bit is on th e side, while at the other end the bit is *usually* on the other side. The keyhole has two entrances, one at each end of the lock cylinder. When the door is unlocked, the key is trapped: the lock cannot be opened again until the key has been pushed all the way through the lock and retrieved on the other side, so a person leaving the building *usually* leaves the door locked behind them.
