The school struggled financially in its early years and had not yet realised its goal of uniting the different fields of the workshops in a single building task. That changed when a private commission arrived from a Berlin lumber merchant who asked the founder of the school to design a personal villa. Every workshop took part, decommissioned battleship.

FC Maflo Regular 14 pt

Josef Albers ran the famous Vorkurs preliminary course, training students in the grammar of materials. His glass fragments and typographical studies pushed abstraction into everyday teaching.

FC Maflo Light 14 pt

The Cesca chair, created in 1928 by Marcel Breuer combined a tubular steel frame with a cane seat and back. Among the earliest tubular steel furniture designs, it exemplified the school ambition of reconciling art with industry and it remains in production to this day.

FC Maflo ExLight 14 pt

Named as a tribute to the daughter of the designer, the chair was mass-produced from the late twenties onward and bought by an American furniture house in 1968, which has kept it in the catalogue ever since. An original example is held by the Museum of Modern Art, whose curator counted it among the ten most important chairs of the twentieth century, and roughly a quarter of a million copies have been purchased

FC Maflo Thin 15 pt

Marcel Breuer was a Hungarian-American architect and designer. A Bauhaus alumnus, he pioneered tubular steel furniture with the Wassily and Cesca chairs, then turned to architecture in Britain and the United States. His Brutalist works include the Whitney Museum, UNESCO headquarters and IBM La Gaude. He became a U.S. citizen in 1944 and won the AIA Gold Medal in 1968.

The Wassily chair was designed in 1925 while Breuer led the cabinet-making workshop at the Bauhaus in Dessau. Inspired by the handlebars of his Adler bicycle, it bent one continuous line of chrome-plated steel into a seat.

FC Maflo Light Italic 23 pt

Sommerfeld House was the first major project completed by the Bauhaus school in Berlin, built almost entirely from salvaged timber.

FC Maflo Medium 26 pt

An early original now sits in the collection of a New York museum whose curator counted it among the ten most important chairs of the twentieth century. The design proved that a single bent tube could carry both structure and comfort.

FC Maflo Bold Italic 28 pt

The Vorkurs trained every incoming student in the grammar of materials before any specialization began at the school.

The Cesca chair, created in 1928 by Marcel Breuer, combined a tubular steel frame with a woven cane seat and back. Among the earliest tubular steel furniture designs, it exemplified the ambition of reconciling art with industry.

The Berlin key *also known as,* German, Schliesszwangschluessel, or, English, forced locking key is a key for a type of door lock, and the lock that goes with it. It was designed by the Berlin locksmith Johann Schweiger patented in 1910, and is *usually* known as the Berlin lock (Berliner Schloss). The key has two bits, one at each end, and no stem as such; at one end, the bit is on th e side, while at the other end the bit is *usually* on the other side. The keyhole has two entrances, one at each end of the lock cylinder. When the door is unlocked, the key is trapped: the lock cannot be opened again until the key has been pushed all the way through the lock and retrieved on the other side, so a person leaving the building *usually* leaves the door locked behind them.
