We Are The Maker of Modern Myths

FC Mobe Bold 20 pt

The school struggled financially in its early years and had not yet realised its goal of uniting the different fields of the workshops in a single building task. That changed when a private commission arrived from a Berlin lumber merchant who asked the founder of the school to design a personal villa. Every workshop took part, decommissioned battleship.

FC Mobe Semibold 11 pt

Josef Albers ran the famous Vorkurs preliminary course, training students in the grammar of materials. His glass fragments and typographical studies pushed abstraction into everyday teaching.

FC Mobe Medium 11 pt

The Wassily chair was designed in 1925 while Breuer led the cabinet-making workshop. Inspired by the handlebars of his Adler bicycle, it bent one continuous line of steel into a seat, and decades later an Italian maker rediscovered its Kandinsky anecdote and gave the chair its name.

FC Mobe Regular 13 pt

The frame bends a single tube of chrome-plated steel and the seat is woven cane, a combination that made the design the first of its kind to reach true mass production. Three official manufacturers carried it across the decades, from the thirties through the fifties to the present day, and an early original now sits in the collection of a New York museum where a curator ranked it among the ten

FC Mobe Light 13 pt

Marcel Breuer was a Hungarian-American architect and designer. A Bauhaus alumnus, he pioneered tubular steel furniture with the Wassily and Cesca chairs, then turned to architecture in Britain and the United States. His Brutalist works include the Whitney Museum, UNESCO headquarters and IBM La Gaude. He became a U.S. citizen in 1944 and won the AIA Gold Medal in 1968.

The Cesca chair, created in 1928 by Marcel Breuer, combined a tubular steel frame with a woven cane seat and back. Among the earliest tubular steel furniture designs, it exemplified the ambition of reconciling art with industry.

FC Mobe Italic 16 pt

An early original now sits in the collection of a New York museum whose curator counted it among the ten most important chairs of the twentieth century. The design proved that a single bent tube could carry both structure and comfort.

FC Mobe Semibold 31 pt

The Vorkurs trained every incoming student in the grammar of materials before any specialization began at the school.

FC Mobe Black Italic 23 pt

The Wassily chair was designed in 1925 while Breuer led the cabinet-making workshop at the Bauhaus in Dessau. Inspired by the handlebars of his Adler bicycle, it bent one continuous line of chrome-plated steel into a seat.

Sommerfeld House was the first major project completed by the Bauhaus school in Berlin, built almost entirely from salvaged timber.

The Berlin key *also known as,* German, Schliesszwangschluessel, or, English, forced locking key is a key for a type of door lock, and the lock that goes with it. It was designed by the Berlin locksmith Johann Schweiger patented in 1910, and is *usually* known as the Berlin lock (Berliner Schloss). The key has two bits, one at each end, and no stem as such; at one end, the bit is on th e side, while at the other end the bit is *usually* on the other side. The keyhole has two entrances, one at each end of the lock cylinder. When the door is unlocked, the key is trapped: the lock cannot be opened again until the key has been pushed all the way through the lock and retrieved on the other side, so a person leaving the building *usually* leaves the door locked behind them.
