Our Stories Written in Shadow

FC Ricken Medium 21 pt

The school struggled financially in its early years and had not yet realised its goal of uniting the different fields of the workshops in a single building task. That changed when a private commission arrived from a Berlin lumber merchant who asked the founder of the school to design a personal villa. Every workshop took part, decommissioned battleship.

FC Ricken Regular 13 pt

Herbert Bayer joined the Bauhaus as a student and stayed to direct the printing workshop. He designed the universal typeface, a single-alphabet geometric sans that dropped capitals entirely.

The Wassily chair was designed in 1925 while Breuer led the cabinet-making workshop. Inspired by the handlebars of his Adler bicycle, it bent one continuous line of steel into a seat, and decades later an Italian maker rediscovered its Kandinsky anecdote and gave the chair its name.

FC Ricken ExLight 13 pt

Named as a tribute to the daughter of the designer, the chair was mass-produced from the late twenties onward and bought by an American furniture house in 1968, which has kept it in the catalogue ever since. An original example is held by the Museum of Modern Art, whose curator counted it among the ten most important chairs of the twentieth century, and roughly a quarter of a million copies have been purchased

FC Ricken Thin 14 pt

Marcel Breuer was a Hungarian-American architect and designer. A Bauhaus alumnus, he pioneered tubular steel furniture with the Wassily and Cesca chairs, then turned to architecture in Britain and the United States. His Brutalist works include the Whitney Museum, UNESCO headquarters and IBM La Gaude. He became a U.S. citizen in 1944 and won the AIA Gold Medal in 1968

Sommerfeld House was the first major project completed by the Bauhaus school in Berlin, built almost entirely from salvaged timber.

FC Ricken Light Italic 22 pt

The Vorkurs trained every incoming student in the grammar of materials before any specialization began at the school.

FC Ricken Bold Italic 23 pt

An early original now sits in the collection of a New York museum whose curator counted it among the ten most important chairs of the twentieth century. The design proved that a single bent tube could carry both structure and comfort.

The Wassily chair was designed in 1925 while Breuer led the cabinet-making workshop at the Bauhaus in Dessau. Inspired by the handlebars of his Adler bicycle, it bent one continuous line of chrome-plated steel into a seat.

FC Ricken Medium 23 pt

The Cesca chair, created in 1928 by Marcel Breuer, combined a tubular steel frame with a woven cane seat and back. Among the earliest tubular steel furniture designs, it exemplified the ambition of reconciling art with

The Berlin key also known as, German, Schliesszwangschluessel, or, English, forced locking key is a key for a type of door lock, and the lock that goes with it. It was designed by the Berlin locksmith Johann Schweiger patented in 1910, and is usually known as the Berlin lock (Berliner Schloss). The key has two bits, one at each end, and no stem as such; at one end, the bit is on th e side, while at the other end the bit is usually on the other side. The keyhole has two entrances, one at each end of the lock cylinder. When the door is unlocked, the key is trapped: the lock cannot be opened again until the key has been pushed all the way through the lock and retrieved on the other side, so a person leaving the building usually leaves the door locked behind them.
